<b>Description</b>			
The general objective of this course is to provide additional training for stock assessment scientists who are familiar with the basic techniques of fishery stock assessment. The course will present the mathematical background to the techniques, as well as software packages developed to implement those techniques. Trainees will apply the techniques to case studies relevant to the ICES area. The specific learning objectives for the course are: 1 ) Understanding the principles behind constructing population dynamics models and identifying their associated estimation methods. 2 ) Experience using techniques to summarize and plot fisheries data. 3 ) Experience with the XSA through FLR. 4 ) Experience with Integrated Analysis through Stock Synthesis. 5 ) Familiarity with decision analysis as a means of summarizing the outcomes from stock assessments.

- Due date set to Oct 31, 2016

I just asked Anna, this is the reply I get:

The course is taking place 28 November – 2 December. So if it can be ready for populating with info and participants by 31 October, that would be best.

Re the functionality expected, please let us know what should be there apart from the basic facilities including the workspace, the social networking, and the user management facilities.
