

gCube - Feature #16273

Feature # 16272 (New): Dataminer: the status of each computation should be stored in an appropriate backend

DataMiner Service - store the computation status in a different backend

Mar 13, 2019 06:41 PM - Pasquale Pagano

Sprint:	DataMiner enhancements		

Description

The computation status has to be stored in an appropriate backend that can manage a huge number of parallel writing operations. A NoSql engine seems suitable for this operation.

This will replace the usage of the gCube items currently stored on the workspace.
