

ISTI Open Access - Bug #20940

Eccessive alternative manifestations received from OpenAIRE

Mar 10, 2021 03:03 PM - Anonymous

Status:	Closed	Start date:	Mar 10, 2021
Priority:	High	Due date:	
Assignee:	Leonardo Candela	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	ISTI Open Portal Issues		
Description			
<p>nel caso di diverse prefazioni in volume vengono esposti da IOP una serie di doi e link che si riferiscono non solo al titolo in oggetto, ma anche ad altri prodotti, sebbene nelle corrispondenti schede bibliografiche in People i campi siano stati compilati correttamente. Questo accade in particolare nel caso di curatele a volumi di proceedings, soprattutto se si tratta di conferenze periodiche.</p> <p>Esempi pratici qui: https://openportal.isti.cnr.it/results?page=1&pageSize=20&qf=&qv=Preface&op_cnrautb=AND&op_type=OR&op_lng=OR&op_date=OR&op_rights=OR</p> <p>e qui: https://openportal.isti.cnr.it/results?page=3&pageSize=20&qf=&qv=Preface&op_cnrautb=AND&op_type=OR&op_lng=OR&op_date=OR&op_rights=OR</p> <p>Sarebbe possibile secondo voi uniformare le visualizzazioni delle prefazioni nel portale in modo che non compaiano più questa sfilza di link?</p> <p>Inoltre, non abbiamo avuto modo di verificare se situazioni analoghe si verificano anche per altre tipologie di prodotti.</p>			

History

#1 - Mar 10, 2021 04:53 PM - Leonardo Candela

- Subject changed from *visualizzazioni prodotti in IOP* to *Eccessive alternative manifestations received from OpenAIRE*
- Status changed from *New* to *In Progress*
- Priority changed from *Normal* to *High*

The issue is not about visualization, it is a matter of the "additional" manifestations resulting from OpenAIRE.

There is nothing we can do on the visualization side ... we have to understand what is happening OpenAIRE side and how to resolve this there.

We should start checking whether the DOI used to refer to the preface is the correct one ... I assume it is the DOI of the entire volume since the preface usually doesn't have its own DOI.

This is also reminding me that we are still managing conference proceedings as a book ([#16772](#)) ... @michele.artini@isti.cnr.it we should work on [#19950](#) ... it is becoming very important (also because of the forthcoming VQR).

Rimuovendo la risposta dell'API di OpenAIRE relativa al record

https://openportal.isti.cnr.it/doc?id=people_____::a7e0aa675fa1863c047e76752270e435

il problema si è risolto da solo, continua invece ad avere problemi la pubblicazione

https://openportal.isti.cnr.it/doc?id=people_____::f80987cbe0ee7e3027a7ea30a5c2b523

perchè l'api di OpenAIRE continua a restituire troppi duplicati:

<http://services.openaire.eu:8480/search/api/publications?doi=10.1007/978-3-642-15464-5>

#3 - Sep 14, 2021 11:57 AM - Leonardo Candela

- % Done changed from 10 to 70

The extent of the issue is smaller than in the past yet some products are still affected, e.g.
